

Money Saving Tips With Spa Repair

Time in your hot tub can be just what you need after a long, hard day. Regular maintenance and spa repair can add years of use to your system.

Some repairs are quite simple and can be easily done by the owner. Others, especially those dealing with electrical components are best handled by the experts.

A very common and easy repair is the filter. The filter can easily become clogged which will cause the system to run at a less efficient level. This maintenance can be easily done by cleaning the filter. It should be cleaned and dried according to the manufacturer guidelines. Some owners have found that having two filters is beneficial because you are able to use one while the other is being cleaned. Filter cleaning should be done at least every 3 weeks, but weekly cleaning is even better.

Another easy maintenance for your spa is to test the water weekly. If the chemicals are imbalanced, it can easily be adjusted. Be sure to follow the guidelines provided with your tub. This simple task can add many years to the tub.

A shock sanitizer is also a good part of your maintenance plan. This sanitizer will purify and clean the system. The pump lines need to be cleaned every 6 months to 1 year. If this is done, the growth of mildew and bacteria will be prevented.

The water in the spa needs to be changed on a quarterly basis. While the water has been drained, you can complete another task which is to clean the interior shell surface. This can help prevent scum build up which will help eliminate mildew or mold odors. A natural enzyme product suggested by the manufacturer is best for this process.

When developing a maintenance plan, do not forget the cover. Conditioning it with products for this specific job will help it to last longer.

If your tub has a wood cabinet, it is suggested that you stain it again. It will depend on whether the spa is indoors or outdoors how often this should be done. For best results you should wash thoroughly and pre-sand before adding the new stain. This acts as a water born preservative.

For larger problems involving the water heater, pump, or motor, it is best to call a qualified expert as these can be dangerous if not done properly.

Following simple tasks of spa repair can add years of use to your hot tub. As with most things, proper maintenance and repair can save you money.
